DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Boccuzzi et al. U.S. Patent 6,094,740.

Regarding claim 1, Boccuzzi discloses a system for monitoring the quality of a channel in Figure 2 comprising a first receiver 12 for receiving a data signal transmitted over the communications channel, a second receiver 14, coupled in parallel with the first receiver, for receiving the data signal, and a signal integrity processor (error detector 16) for manipulating an output signal from the second receiver to monitor the quality of the communications channel (see col. 1, lines 44-45; col. 3, lines 2-30).

Regarding claim 8, Boccuzzi further discloses a divisor element 28 that determines the symbol error rate (SER), and is thus considered a link integrity processor coupled with the SI processor for detecting link-level errors in the output signal.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/767,748

Art Unit: 2611

4. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Boccuzzi et al.

Regarding claim 9, Boccuzzi discloses a system for monitoring the quality of a communications channel as described above, but does not expressly disclose a module for enabling a system operator to visualize the quality of the communication channel. However, display modules allowing operators to visualize data representative of the quality of a communications channel are well known in the art. Accordingly, it would have been obvious to one of ordinary skill in the art to use a module enabling an operator to visualize the quality of the communications channel in the system of Boccuzzi in order to allow for operator to make adjustments to the system dependent on the channel quality.

Allowable Subject Matter

- 5. Claims 11-20 are allowed.
- 6. Claims 2-7 and 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David B. Lugo whose telephone number is 571-272-3043. The examiner can normally be reached on M-F; 9:30-6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jay Patel can be reached on 571-272-2988. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
